

τ around
η along the height
Q across the wall

the band at mid-thickness is the family $X_0(\tau, \eta)$; its version points faded where the wall hides them

the cut face enlarged: a normal slice, the band's η-line, Q across the wall

the same two paths seen down the C–N axis, N in front; the digits are the column labels

tuH
$\tau = -\pi/3,\ \eta = -\eta_0$

H
$\tau = 0,\ \eta = \eta_0$

eclipsed
$\tau = \pi/3,\ \eta = \eta_0$

tH
$\tau = 2\pi/3,\ \eta = \eta_0$
