

methyl and amino,
two fragments

X_0 and its half-turn axis

$$bX_0 = X_0P_b = R_bX_0, \\ \text{so } H = \{E, b\}$$

the mirror
plane edge-on

the 36 subgroups between H and S , grey; the 10 that keep the bonds, black; the chain $H < G_6 < G_{12} < B$, blue

the bond interval $[H, B]$: 10 subgroups,
17 covers, every node written by its
generators, so each step up adjoins
one generator; the same chain in blue

versions G_{12}/H : the same positions, position j carries label $g(j)$

$$H \\ g = E$$

$$tH \\ g = t$$

$$t^2H \\ g = t^2$$

$$uH \\ g = u$$

$$tuH \\ g = tu$$

$$t^2uH \\ g = t^2u$$
