

$g_j(X) = g_0(t^{-j}X)$ at $\tau = 0, 2\pi/3, 4\pi/3$;
the disc is one σ , the ring 2σ , for $\sigma/d = 1/3$

$$c = \langle g_0, g_1 \rangle = e^{-d^2/8\sigma^2}, \quad w_{A_1} = \frac{1+2c}{3}, \quad w_E = \frac{2(1-c)}{3}, \quad w_{A_2} = 0$$
